

Diabetic Screenings

Diabetic Screenings:

HbA1c and Urine Protein Screening (Microalbumin) are recommended for members who have a diagnosis of diabetes.

These tests are offered at no cost to Medicare members who need them. These tests must be completed during 2020 in order for you to be eligible to receive a reward card.

If you have kidney disease and are under the care of a nephrologist, you may not need to have the urine protein test completed. In this case, you may provide evidence of a visit with your nephrologist during 2020.

Note: Members must complete both screenings to be eligible for a reward card.

Provider: Please fill out this form, then fax to 410-779-3957. Please note, both tests and all data fields, including the results, must be completed in order for you University of Maryland Health Advantage patient to receive their reward card.
